Squid

Instruction sheet   Read first!

**Important!** The cardboard and paper parts are fragile so please work carefully. Start with building the cardboard skeleton frame. The illustrations will lead you through the process.

It's not necessary to use a glue but if these parts don't feel properly locked, you could apply a little bit of glue.

3

keep the small holes aligned
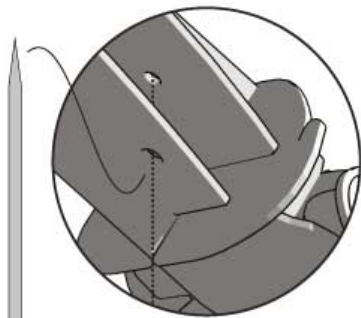

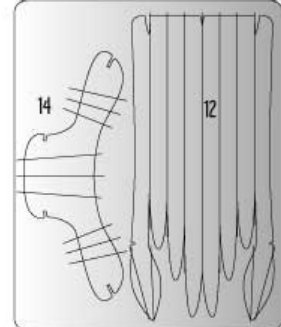

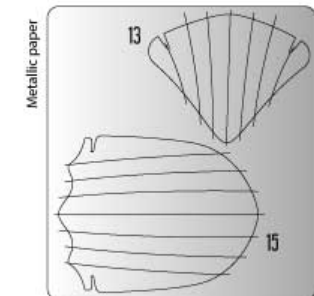

For inserting a skewer to make a standing display
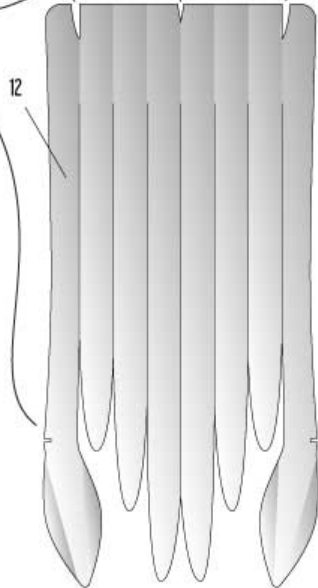

For hanging on a nail in the wall

4

When handling the metallic paper parts, clean hands will be best for a nice final result

light bend downwards
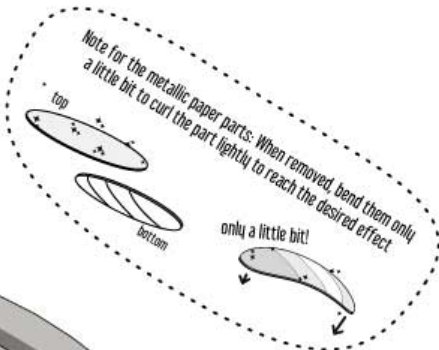

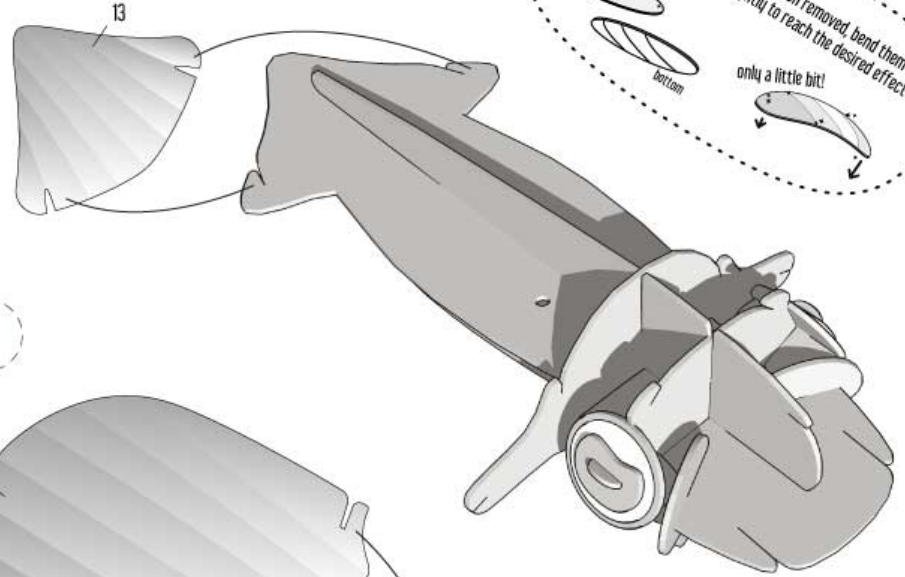

Curling the arms / tentacles

For curling the squid arms and tentacles, use a round smooth object like a big permanent marker or something simular. A regular pen is a bit too thin to make a nice curl without making wrinkles. Make tests with the leftover metallic paper.

Ø +15mm

12
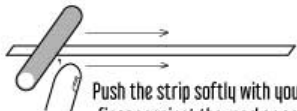

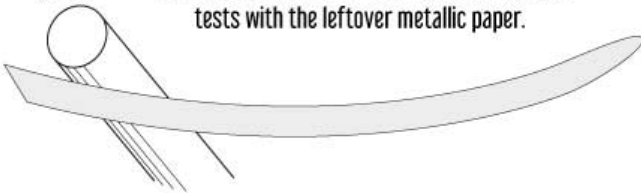

Push the strip softly with your finger against the marker and slide along the strip to make it curl a little bit.

5

Note for the metallic paper parts: When removed, bend them only a little bit to curl the part lightly to reach the desired effect
